# ANTIBOT – an anti-bot/automated account program for Twitter/X.
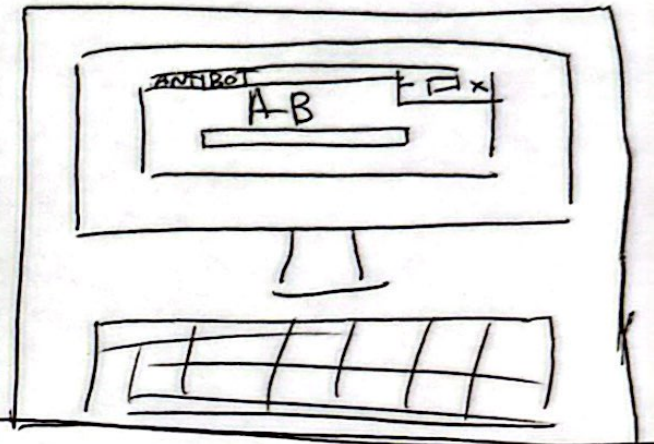

Solution 1:

tampermonkey

Tampermonkey is a browser extension that allows the user to input scripts of code that interact with certain websites. A script that can detect bots based on post activity + following can be created to allow the user to automatically identify and block these botted accounts.

Solution 2:

ANTIBOT

AB

ENTER your Twitter handle below.

@ [   ]

We'll handle the rest for you.

Create a website that prompts the user to enter their Twitter handle. The site will analyze the user's followers and sift out any suspected bot accounts for the user to block.
Will not work with privated accounts.

Solution 3:

ANTIBOT
A B

Create a computer application that can do all the same feats the website can, though this would likely be redundant.

(least likely option.)
